

# Introduction-

## How much do know about cancer

"Cancer" is a major challenge facing mankind, and the number of people dying of cancer has been increasing in recent years. We use OpenData to collect cancer data over the years, use PowerBI to make various types of charts, and then use these charts to analyze the trend and direction of cancer occurrence in the past three years.

The group addresses the following research questions in cancer:

1. Discuss the occurrence of cancer in each region
2. Understand the increase and decrease of cancers every year
3. Comparing the ratio of cancer incidence between men and women
4. Study the average age of cancer occurrence in three years
