# 今天,我想來點

## 高中生必備APP

## 作品簡介

本系統主要目的是 把常用軟體合併成一個。其他軟體或許只能滿足單一個 功能,卻無法另個 功能,想查找另一個東西必須跳到專屬那個功能的產物就的產物就此,符合就此 誕生!

### 動機

為了追求便利生活,需要倚靠的軟體過多,導致手機內存嚴重不足。所以我們想利用自己設計的程式解決高中生在日常遇到的常見問題。

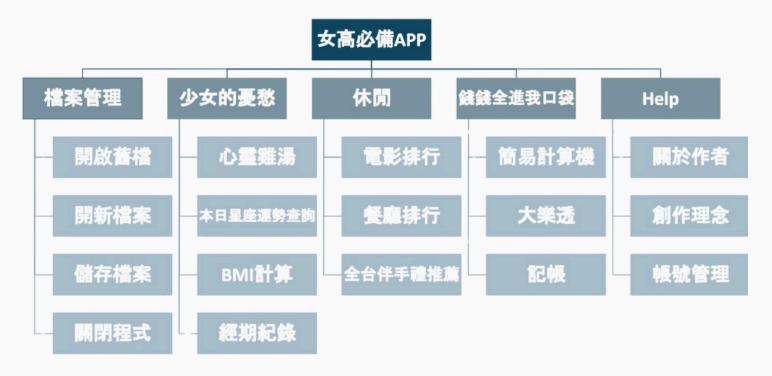

### 創意特色

能夠一鍵擁有各種應用程式的軟體是我們一直很講究的功能,將日常中常用或者能吸引高中生的功能都寫進這個程式,例如:計算機、記帳、經期紀錄、塔羅牌、餐廳、伴手禮推薦...,把這些東西合為一體,製作成一個實用的「高中生必備APP」。

### 使用技術

網路爬蟲和Tkinter程式庫是我們專題中的兩個重要技術框架,通過網路爬蟲,我們能夠從各種網站上收集所需資訊;通過Tkinter,我們可以輕鬆地設計和實現一個直觀友好的用戶界面,它們為我們的應用程式提供了必要的功能和用戶體驗,使得我們能夠實現專為女高中生設計的應用程式。

## 功能架構

# Today,I want some Must-Have APP for High School Students

### introduction

The main aim of this system is to merge commonly used software into one. Other software may only serve one function, forcing users to switch between different programs, wasting time. Thus, our product meets this need!

### motivation

To make life easier, we rely on many apps, which fills up our phone storage. That's why we created a program to solve common daily issues for high school students.

#### **Creative features**

We've made a software that combines useful tools high schoolers need, like a calculator, budget tracker, period tracker, tarot cards, restaurant finder, souvenir recommendations, etc. It's the ultimate "Must-Have App for High School Students"!

## **Use technology**

In our project, we used web scraping and Tkinter. Web scraping collects data from different websites, while Tkinter helps us design a user-friendly interface. These technologies give our app the features and experience tailored for high school girls.

## **Functional architecture**
